

Customer Snapshot

A global manufacturer, distributor and visual communication solutions company with operations across 7 countries

-  **3** HEAD OFFICES
-  **55** SOLUTION CENTRES
-  **2** DISTRIBUTION SITES
-  **19** MANUFACTURING PLANTS

Overview

Laying the foundation for Data Transformation

RegCentric partnered with Orora to implement the right tools, processes, and framework required to uplift its Data maturity to leverage the breadth of their data, and radically shift their business model to be data driven, geared towards Industry 4.0.

RegCentric's contributions ranged from defining target state data architecture, through to partnering in delivery leadership, technical implementation of solution, providing data training, and resource augmentation services.

RegCentric's contribution has been pivotal to our Cloud Data warehouse & reporting project, laying the foundational Data Architecture and Data management capabilities we required to uplift our Data maturity. The team's deep expertise, practical approach, commitment and drive to build out our Data warehouse and required data capabilities have been exceptional and inspiring.

Partnering with RegCentric has been one of the best decisions we made on the project, and we consider RegCentric as a long-term strategic partner in our data journey.

- Srikanth Sharma, CIO, Orora, ANZ region

The Challenge

Manufacturing Industry is starting to move towards its 4th Industry revolution (Industry 4.0) that is centered around Data, AI, Internet of Things, Automation and Digitisation to transform this industry into a new era for manufacturing for speed, reliability and efficiency.

Orora underwent divestment of one of their divisions and therefore had to execute separation of their IT systems, data and resources. Orora wanted to leverage this opportunity to establish a Cloud based Data Warehouse and migrate their data and reports from its legacy systems to a modern, scalable and feature-rich platform, while meeting the divestment requirements. RegCentric was engaged to provide Data governance and consultancy over their Data Warehouse & reporting project and assist in defining a strategy to increase the maturity of data utilisation and management.

The Solution

RegCentric's consultants developed the target state Data Architecture for the Data Warehouse project and a roadmap for Data Management disciplines for Orora to achieve progressive Data Maturity uplift over time.

RegCentric's consultants ensured the project scope, delivery plan and detailed design aligned to the target state Data Architecture factoring in its scalability for future vision of Orora. They worked in collaboration with Orora's staff and delivery partners across all levels for the delivery of quality and sustainable solution from data sourcing, integration, through to reporting.

RegCentric stepped in from time to time to provide thought leadership, guidance and pragmatic approach to overcome data and delivery challenges faced by the project.

In addition, RegCentric assisted Orora to cover some of data and technical skill and capacity gaps, as and when needed, with a flexible engagement model.

RegCentric's technical and data specialists with their breadth of capabilities, supported the project with a range of activities such as source data ingestion, data discovery, data and system Integration testing ensuring the quality, scalability and sustainability of the project deliverables.

The Outcome

- ✓ Orora has established a cloud-based data warehouse with quality controlled and scalable Data architecture, to efficiently meet business needs going forward.
- ✓ Orora now has clear set of Data principles, enabled to self govern its solutions going forward, for simplification of data landscape with reusability to optimise future investments to data maturity uplift
- ✓ With RegCentric's guidance, Orora has acquired a fit for purpose tool to cover the core data mgmt. capabilities such as Business Glossary, Data quality profiling, Data discovery and lineage for change agility and data quality uplift
- ✓ A Business glossary has been defined with definitions for ~3000 critical data attributes to support data consistency
- ✓ With RegCentric's Data awareness training, Orora's staff have gained greater appreciation of Data concepts/capabilities to drive forward their data journey.
